TECHNOLOGICALLY ADVANCED METHOD FOR WATER TREATMENT & CONDITIONING CHEMICAL-FREE TWT® DEPOSIT CONTROL SYSTEMS

HARD WATER IS THE MOST COMMONLY REPORTED WATER QUALITY PROBLEM BY CONSUMERS IN THE U.S., FOUND IN OVER 85 PERCENT OF THE COUNTRY. OVER 60% OF THE EARTH'S WATER IS GROUNDWATER, WHICH PICKS UP MINERALS, ROCKS AND SOIL, INCLUDING CALCIUM AND MAGNESIUM CONTAMINANTS THAT MAKE WATER HARD.

Some telltale signs that water may be hard:

- Clogged pipes and/or appliances may be due to hard water.
- Mineral deposits can form in coffee makers, shower drains, pipes and plumbing equipment.
- Consumers may notice a film build-up on shower tiles, bathtubs, or even themselves, which can cause dry skin and dull, limp hair.
- Heating bills are increased, because the hard water forms an insulated shell between the heating element and the water to be heated. Heated hard water causes scale.
