YOUR GUIDE TO WATER TESTING

WHY TEST YOUR WATER?

WTA will give you the answer

Although the testing approach may seem bothersome, it is like a good routine physical by a health-care specialist. Avoiding this step is to assume that "what you don't know won't hurt you." Sorry, but it will! Avoiding the truth may result in health problems and costly repairs to your plumbing system and other fluid fed equipment (***protect the investment in your home, office and/or facility.***)

Water contamination can have a negative affect on water-fed equipment and on the health of your family. The affects may be immediate or long term and include everything from ruined equipment, stomach aches to serious long-term health problems.

A US Geological survey found that **70% of private wells were contaminated**. The United States Environment Protection agency (USEPA) recommends that you test for a minimum of coliform bacteria, nitrate and lead, even if you have public water.

Periodically Re-test and Evaluate Performance
(yearly or as otherwise needed)

Simply owning a water treatment system does not guarantee that your water will be safe forever. In addition to

monitoring your system and providing for replacement of products and/or parts, consumables you also need to periodically test and re-evaluate the quality of the water coming into and going out of your system to determine if changes and/or upgrades are needed. The ultimate responsibility is yours (***know what's happening in your neighborhood.***)

Selecting a Treatment System for Your Needs
(Residential, Commercial, Industrial).

A comprehensive approach to selecting a fluid treatment system includes:

- Testing your water or fluid to determine the specific problems in it and in your area
- Selecting the system and/or components of a system that will solve these problems
- Installing and monitoring your system (**retrofit or new**)
- Periodically re-testing to insure that you are maintaining the treatment system correctly and that your old problems are being treated and controlled, and that new problems have not developed.

TRIANGULARWAVE TECHNOLOGIES, INC. (TWT®) RECOMMENDED TESTING PROCEDURE

Water testing can be a complicated process. However, working with [Water Test America](#) testing labs they make it simple. They start by testing your water for most common indicators of contamination (Based on test requested by customer). If they find any indicators, they can recommend further testing to help identify a specific problem. Once the problem is identified, they may recommend a way to fix the problem. (They do not sell water treatment products or endorse one brand over another, they simply give you information so you can make an educated purchase)

Contact: [Water Test America](#)
www.watertestamerica.com

1. View the WTA web site and choose the water test kit that meets your requirements & expectations.
2. Order water test kit(s)–Up to 99 to choose from.
3. Upon check out enter in the coupon code field and in the comments field, code# TWT444RS to receive your special TWT discount, one time only (Rebate).

4. For additional support or to verify that WTA has given you the special discount, contact TWT, Inc. at: info@twtwatertreatment.com – Attn: Customer support.
5. Kit(s) come complete with easy to follow instructions, including sample bottles.
6. Take water samples following the easy to use instructions.
7. Put the samples in the enclosed return shipping pack.
8. When samples are received, at [Water Test America](#) Labs they analyze the samples and send you the report.
9. A copy of the report will be sent to TWT, Inc. TWT engineering staff will review the report, TWT or your distributor will contact you to discuss the appropriate treatment products, systems, application and installation for your specific needs.
10. We look forward to providing you with a cost-effective and chemical-free water treatment solution.

Thank you

REBATE:

If a Triangularwave Technologies Inc. residential, commercial and/or industrial product or system is purchased, as a result of testing your water and further consulting with a representative of TWT, Inc., the testing fee/cost, up to \$150.00 US, one test only and a one time only, will be credited towards your purchase, (minimum purchase order from TWT, Inc. \$600.00 US). Proof of purchase from WTA (paid receipt) must be submitted to receive rebate.

Why use water treatment, filtration, disinfection, purification, products and systems provided by Triangularwave Technologies, Inc. (TWT®)

TWT, Inc. is America's leading fluid/water treatment company based on its patented triangularwaveform technology. TWT's chemical-free fluid treatment and management methods have been accepted for use around the world by governments, industry, and individuals, who all enjoy the increased safety, extended equipment life cycle, and decreased operating costs that the TWT systems deliver.

TWT® products and systems provide technologically advanced methods for water and fluid management that are both efficient and cost-effective. Components and subsystems chosen from across the range of treatment methods can be combined in different configurations to provide custom solutions specific to any industry, site or application.

TWT systems work to consistently deliver high quality water, reduce scale and bio-fouling in plumbing systems, and to increase efficiency of both once-through and re-circulating HVAC, process cooling, agriculture, industrial processing, wastewater and other fluid based systems. Each product line offers a variety of both standalone and comprehensive treatment solutions for end-to-end fluid management, for all types of applications.

In order to ensure the greatest level of performance and satisfaction in your work with the TWT products & systems, we recommend that you contact our engineering staff at address below, who will be pleased to work closely with you to determine the optimal application and installation for your industry specific needs.
